

SwiftScan at a glance...

SwiftScan is a modern, mobile-first RF scanning solution designed to simplify and accelerate warehouse operations in SAP EWM environments (Fully compatible with Android and iOS devices).

Built for speed, accuracy, and ease of use, SwiftScan transforms traditional RF processes into an intuitive, scanner-driven experience—reducing manual effort, minimizing errors, and improving overall warehouse productivity.

SwiftScan is designed as a lightweight, scalable solution that integrates seamlessly with your SAP landscape—helping organizations move away from complex RF screens toward a smarter, faster, and more user-friendly warehouse execution experience.

Key Features:

- **End-to-End Warehouse Execution** - Seamlessly supports Goods Receipt, Putaway, Picking, Packing, Loading, and Transfer Posting.
- **Cross-Platform Mobile App** - Fully compatible with Android and iOS devices, enabling use on modern smartphones and handheld scanners.
- **Single-Step Intelligent Scanning** - Scan once, SwiftScan intelligently identifies the process (PO, Inbound Delivery, HU, etc.) and guides the user without unnecessary prompts.
- **Real-Time SAP EWM Integration** - Direct integration with SAP EWM ensures instant validation and transaction posting.
- **Smart Validations Built-In** - Ensures accuracy by validating material, batch, bin, and HU data in real time.
- **System-Guided & Queue-Based Execution** - Supports both system-driven task allocation and manual queue selection.

Why SwiftScan?

- Works across SAP S/4HANA EWM embedded or decentral and WM on Public cloud (Public & Private Cloud)
- Rapid deployment with minimal setup
- Reduce training time with intuitive workflows
- Minimize errors with real-time validations
- Increase warehouse throughput and efficiency
